Alex Weeks

IT Operations & Technology Leader

Oklahoma City Oklahoma | +1 (405) 795-0925 | alex@alex-weeks.com | alex-weeks.com | linkedin.com/in/alexweeks

PROFESSIONAL SUMMARY

IT operations and technology leader with experience managing technical teams, optimizing infrastructure, directing vendors, and delivering organization-wide improvements. Proven record of reducing cloud expenditure by 50%, automating workloads equivalent to two full-time employees, and leading operations supporting mission-critical systems and geographically distributed teams. Combines hands-on technical expertise with operational accountability, resource management, and cross-functional delivery.

PROFESSIONAL EXPERIENCE

Information Technology Analyst Oct 2021 – Present

SC Services | Oklahoma City, Oklahoma

Lead infrastructure operations, business automation, vendor management, and technology governance for a 39-person organization, driving cost reduction, operational efficiency, and service reliability.

- Reduced cloud expenditures by 50% through infrastructure optimization and resource management while maintaining required business capabilities and service levels.
- Designed and implemented 35 business process automations, eliminating manual effort equivalent to two full-time employees and increasing capacity for higher-value work.
- Manage a portfolio of 28 technology vendors with approximately $750K in annual spend, overseeing vendor relationships, service delivery, and technology procurement.
- Prepare the organization's full $2.5M annual IT budget for management approval, coordinating technology spending plans, vendor costs, improvement projects, and operational requirements.
- Established IT governance from the ground up, authoring the organization's IT policies, standards, and procedures to formalize security practices, operational controls, and technology management.
- Led delivery of 15+ technology initiatives, coordinating business stakeholders, vendors, and technical resources to implement solutions aligned with organizational priorities.

Configuration & Inventory Control Supervisor Nov 2020 – Oct 2021

BankOnIt LLC | Oklahoma City, Oklahoma

Led hardware configuration, inventory control, and shipping operations while directly supervising six employees. Held responsibility for team performance, staffing, employee development, and operational results across high-volume enterprise IT logistics.

- Supervised and managed six direct reports, overseeing hiring, time-off approvals, performance reviews, salary increases, and employee discipline while maintaining team performance and operational continuity.
- Led enterprise hardware configuration operations supporting 300 clients and more than 100,000 computer configurations across 550 system images, maintaining configuration standards and coordinating execution across diverse client environments.
- Managed approximately $5 million in client hardware inventory, overseeing asset tracking, inventory accuracy, purchasing thresholds, and hardware availability.
- Directed shipping and receiving operations handling approximately 12,000 packages valued at $1.2 million while achieving 99% on-time shipping performance through hands-on leadership, logistics coordination, and shipment tracking.

Travel Team Technician Apr 2019 – Nov 2020

BankOnIt LLC | Oklahoma City, Oklahoma

Provided onsite technical support across client environments, troubleshooting hardware, software, and network issues while coordinating technical resources to resolve incidents and support project delivery.

- Diagnosed and resolved onsite hardware, software, and network issues, providing hands-on troubleshooting and end-user support across client environments.
- Coordinated onsite project activities, documented technical findings, and communicated customer issues and project status to technical teams and project leadership. Assisted less experienced technicians with troubleshooting and customer communication.

Help Desk Technician Oct 2018 – Mar 2019

Apex Systems | Oklahoma City, Oklahoma

Delivered enterprise help desk support, resolving application, access, and infrastructure-related issues while meeting service quality and customer satisfaction expectations.

- Earned the Customer Satisfaction (CSAT) Award for achieving the third-highest customer satisfaction score across the entire help desk of over 100 employees.
- Resolved enterprise IT issues involving Active Directory, Exchange, DNS, software applications, and user access while meeting established service and performance targets.
- Created and maintained knowledge base articles to improve troubleshooting consistency and escalated enterprise-wide or production-impacting incidents to Corporate Operations and Major Incident Management teams.

MILITARY SERVICE

Oklahoma Army National Guard March 2015 – Present

Data Operations Warrant Officer

Warrant Officer | Current

Lead secure communications, network infrastructure, and technical operations supporting mission-critical logistics and command functions across expeditionary, mobile, and fixed environments.

- Accountable for approximately $3 million in communications and network assets across dispersed operational sites, maintaining operational readiness, configuration compliance, and zero loss of government property.
- Designed and sustained secure network architectures connecting 10 geographically dispersed operational sites and operated eight satellite communications platforms to maintain resilient connectivity and secure data exchange.
- Led a 14-person technical support organization, including three direct reports and 11 indirect personnel, delivering service desk support for logistics information systems and mission-critical users.
- Maintained cybersecurity and configuration compliance across approximately 100 mission systems through software patching, vulnerability remediation, and implementation of security controls.

Signal Information Systems Support Specialist

Enlisted | March 2015 – Warrant Officer appointment

Installed, operated, and maintained multi-user information systems while supporting tactical communications, systems integration, technical training, and operational documentation.

- Supervised the deployment, installation, operation, and unit-level maintenance of information processing systems supporting operational requirements.
- Provided technical guidance and troubleshooting for information systems personnel and end users, resolving issues involving system operation and information services.
- Coordinated systems integration, identified telecommunications and information management requirements, and supported requests for logistical resources.
- Developed on-site training programs and authored operational manuals, procedures, and technical

requirements documentation.
