Alex Weeks

IT Operations & Technology Leader

Oklahoma City Oklahoma | +1 (405) 795-0925 | alex@alex-weeks.com | alex-weeks.com | linkedin.com/in/alexweeks

PROFESSIONAL SUMMARY

IT operations and technology leader with experience managing technical teams, optimizing infrastructure, directing vendors, and delivering organization-wide improvements. Proven record of reducing cloud expenditure by 50%, automating workloads equivalent to two full-time employees, and leading operations supporting mission-critical systems and geographically distributed teams. Combines hands-on technical expertise with operational accountability, resource management, and cross-functional delivery.

PROFESSIONAL EXPERIENCE

Information Technology Analyst Oct 2021 – Present

Snowmass Creek Capital | Oklahoma City, Oklahoma

IT professional with full ownership of infrastructure, automation, and vendor ecosystems, driving efficiency, reliability, and cost-effective technology solutions that support organizational growth.

- Directed infrastructure optimization initiatives that reduced cloud expenditure by 50%, improving cost efficiency while maintaining operational requirements.
- Designed and implemented automation across 35 business users, eliminating manual workloads equivalent to two full-time employees and increasing operational capacity.
- Led delivery of 15+ cross-functional technology initiatives, coordinating stakeholders, vendors, and technical resources to achieve business objectives.
- Managed technology vendor relationships, contributed to IT budget planning, and established policies and procedures supporting operational consistency, security, and governance.

Configuration & Inventory Control Supervisor Nov 2020 – Oct 2021

BankOnIt LLC | Oklahoma City, Oklahoma

IT operations leader with end-to-end responsibility for enterprise hardware configuration, inventory management, and logistics. Oversaw operations supporting 300 clients, 100,000+ computer configurations, $5 million in client inventory, and 12,000 shipments, maintaining 99% on-time shipping performance through hands-on leadership and operational accountability.

- Led enterprise hardware configuration operations supporting 300 clients and more than 100,000 computers across 550 system images, maintaining configuration standards and coordinating team execution across diverse client environments.
- Held end-to-end accountability for inventory operations managing client hardware portfolios valued at approximately $5 million, overseeing asset tracking, inventory accuracy, purchasing thresholds, and hardware availability.
- Directed shipping and receiving operations handling approximately 12,000 packages valued at $1.2 million while achieving 99% on-time shipping performance through hands-on operational leadership, logistics coordination, and shipment tracking.

MILITARY SERVICE

Data Operations Warrant Officer 2015 - Ongoing

Oklahoma Army National Guard

Lead secure communications and data infrastructure supporting mission-critical logistics operations across expeditionary, mobile, and fixed environments. Integrate satellite communications, network engineering, cybersecurity, and technical support to maintain reliable information systems in rapidly changing operational conditions.

- Served as the accountable technical authority for $3 million in communications and network assets across

dispersed operational sites, ensuring operational readiness, configuration compliance, and zero loss of government property.

- Designed and sustained secure network architectures connecting 10 geographically dispersed operational sites and operated 8 satellite communications platforms, enabling resilient connectivity, secure data exchange, and continuity of logistics and command operations.
- Led a 14-person technical support organization, including 3 direct reports and 11 indirect personnel, delivering enterprise service desk support for logistics information systems and mission-critical user operations.
- Maintained cybersecurity and configuration compliance across approximately 100 mission systems through software patching, vulnerability remediation, and security controls to protect operational networks and sustain mission availability.
